Abstract

This article examines the specific features of the influence of ideological factors on the development of young people, with particular emphasis on the role of modern technologies, educational activities, and social institutions in shaping their worldview and ideological awareness. It analyses the importance of freedom of thought, speech, belief, and access to information in the context of Uzbekistan's constitutional framework. Particular attention is devoted to the distinction between conventional propaganda and ideological communication technologies based on mutual interaction and consideration of public interests. The article identifies five major areas for strengthening the influence of ideological factors: improving the spiritual environment and establishing a new spiritual space; combating ignorance through enlightenment; increasing citizens' involvement in reforms and their confidence in the future; developing modern thinking and building a society resilient to threats; and enhancing ideological literacy and strengthening ideological immunity. The study also highlights the importance of family, neighbourhood communities, political parties, mass media, educational institutions, and civil society organizations in this process. It concludes that effective ideological education requires a differentiated approach that takes into account young people's psychological characteristics, interests, and values, as

well as the use of modern communication technologies and scientifically grounded educational methods.

Keywords: ideological factors, youth development, ideological education, ideological communication technologies, spiritual environment, ideological literacy, ideological immunity, modern thinking, information security, enlightenment, social institutions, New Uzbekistan.

INTRODUCTION

Ideological factors possess distinctive characteristics in every historical period. Therefore, it is advisable to employ different methods and tools at all stages, in various circumstances and throughout the processes involved in implementing them. In this regard, the application of modern technologies, particularly in organizing spiritual and educational activities, meets the demands of the present era and can facilitate the achievement of expected results.

As stated in Article 29 of the Constitution of the Republic of Uzbekistan, "Everyone shall have the right to freedom of thought, speech and belief. Everyone shall have the right to seek, receive and disseminate any information, except information directed against the existing constitutional order and other restrictions established by law" [1]. In order for citizens to fully exercise these rights, it is necessary to establish effective mechanisms governing interaction between the state and society. Developing practical mechanisms to fulfil this task and applying new, modern technologies to communicate the content, essence and objectives of ideological factors to young people have become pressing issues.

In view of these circumstances, it is important to emphasize that the need remains to organize cooperation among families, mahallas, political parties, mass media and other social institutions in promoting ideological factors [2].

Today, these factors are widely applied by numerous government bodies and civil society institutions to ensure the effective organization of their activities. Their

use has become an established practice not only in the legislative, executive and judicial branches of developed countries but also in Uzbekistan, which clearly demonstrates the growing importance of such technologies.

METHODS

This study employs analytical, comparative and systematic approaches to examine the influence of ideological factors on youth development. Particular attention is given to distinguishing between the technologies used to internalize ideological factors and conventional propaganda systems. In many cases, propaganda does not take into account the interests, views and values of information recipients. By contrast, ideological communication technologies do not merely transmit information to the population; they also respond to feedback from recipients and are based on mutually beneficial, two-way cooperation. Within this approach, relationships and forms of communication aimed at internalizing ideological factors are organized in accordance with citizens' interests.

RESULTS AND DISCUSSION

Establishing the ideological foundations of building New Uzbekistan requires the implementation of a number of important tasks arising from the pressing needs of contemporary society.

The first priority is to improve the spiritual environment and establish a new spiritual space. This requires strengthening efforts to ensure the effective implementation of tasks stipulated in adopted decisions and other regulatory documents aimed at improving the existing system and the activities of its personnel. It is also necessary to summarize the experience accumulated in the spiritual and educational sphere, identify and address existing shortcomings, and adopt a programme of measures designed to achieve greater effectiveness through new approaches. To ensure the implementation of the tasks outlined in this

programme, relevant government organizations and civil society institutions, including the Republican Mahalla Charitable Public Foundation, should develop and implement action plans and roadmaps. Analytical reports on the work carried out should be regularly prepared and submitted to the relevant authorities, while appropriate measures should be taken to eliminate identified errors and shortcomings. In this regard, particular importance should be attached to the Resolution of the President of the Republic of Uzbekistan dated 14 November 2019, "On Increasing the Effectiveness of Spiritual and Educational Activities and Raising the Development of the Sector to a New Level" [3].

The second priority concerns combating ignorance through enlightenment. To achieve this, the Republican Center for Spirituality and Enlightenment and its regional branches should establish new groups of propagators consisting of qualified specialists with strong theoretical knowledge, effective communication skills and a high level of public speaking competence. These groups should be actively involved in organizing educational and awareness-raising activities on current issues of the national idea and ideological education in educational institutions, mahallas, enterprises, organizations and work collectives. Representatives of law enforcement agencies and religious institutions should also be widely involved in such activities to increase their impact and effectiveness. A mechanism for appropriately encouraging and rewarding members of propaganda groups should be introduced. Cooperation between the responsible staff of citizens' self-governing bodies (MFYs) and spiritual enlightenment departments should be strengthened to prevent manifestations of ignorance among the population. Furthermore, mass media should regularly publish popular-scientific articles under the heading "Ignorance - The Enemy of National Development" and prepare and broadcast relevant radio programmes and television features.

The third priority is to increase citizens' involvement in reforms and strengthen their confidence in the future. In this regard, attention should be directed towards

strengthening the legislative framework for creating new jobs through the establishment of production enterprises that take into account the economic characteristics and potential of different regions and specialize in processing local raw materials. It is also essential to provide employment for the working-age population, improve working conditions, create opportunities for rest and health recovery, and further develop mechanisms for ensuring fair remuneration in accordance with the work performed. The regulatory and legal foundations of these measures should be consistently strengthened. At the same time, steps should be taken to ensure that the results of ongoing reforms are achieved without delay and within the shortest possible time. To study unemployment, prevent its occurrence and develop measures to provide permanent employment, particularly for graduates and women, the establishment of a special council under the Ministry of Labour of the Republic and its regional branches was proposed. It was also considered necessary to develop a long-term strategic programme for this council and introduce a strict monitoring mechanism to ensure the implementation of its objectives. The population should be regularly informed about the council's activities through local and national print media and television, at least once a month. In addition, permanent employment fairs should be organized in convenient locations in regional, city and district centres.

The fourth priority is to develop modern thinking and build a society resilient to threats. To improve the national education and upbringing system, greater attention should be paid to studying the history of the homeland, its rich cultural and spiritual heritage, ancient historical sites, and the lives and activities of prominent representatives of previous generations. All educational institutions, retraining and professional development courses, and educational centres should be equipped with modern information and communication technologies, including an adequate number of computer laboratories. Efforts should also be intensified to expand access to Internet services, increase connection speeds and make Internet access more affordable. Educational institutions throughout the

country should make wider use of distance-learning opportunities. The government should regularly update the relevant regulatory and legal documents aimed at developing modern thinking, while paying sufficient attention to information security. Furthermore, the Republican Center for Spirituality and Enlightenment was expected to develop a special programme for 2020-2030 outlining measures to counter information attacks and protect society against them, and to ensure its consistent implementation.

The fifth priority is to increase ideological literacy and strengthen ideological immunity. To achieve the intended effectiveness of activities promoting the national idea, awareness-raising programmes should be organized for differentiated target audiences. The opportunities offered by mass media should be used extensively and effectively to improve the ideological literacy of the population. Educational institutions should organize "Ideological Vigilance Month" activities involving events, discussions and meetings on a wide range of topics. Special training courses aimed at improving ideological literacy should also be established for population groups outside the formal education system. In organizing these courses, modern methods and, in particular, online technologies should be used effectively.

It should be noted that the application of these factors places particular emphasis on awareness-raising activities, the results of scientific research and the dissemination of information. In this respect, these methods share certain similarities, as they all make extensive use of propaganda and communication tools. However, their application requires ensuring the credibility of the ideas being promoted and creating opportunities for the public to discuss pressing social issues openly.

When applying specific propaganda technologies to increase the effectiveness of ideological factors in youth development, particular attention must be paid to the psychology of each young person and the factors that influence them [4]. The primary objective of propaganda is to shape young people's worldviews through

the internalization of ideological factors, encourage them to adopt certain values and motivate them to take action. The ancient Greek philosopher Plato aptly emphasized the importance of directing people's attention: "The art lies in attracting people's attention. For this purpose, there is no need to grant them the gift of sight, for they already possess it. The only problem is that a person looks in a direction other than the one intended. Considerable effort is therefore required to direct their attention towards the right direction" [5].

CONCLUSION

Ideological factors play an important role in shaping young people's worldviews, values and social attitudes. Their effectiveness largely depends on the appropriate use of modern communication technologies, the consideration of young people's psychological characteristics and the establishment of cooperation among families, mahallas, government institutions, political parties, mass media and other civil society organizations. Improving the spiritual environment, combating ignorance through enlightenment, strengthening public confidence in reforms, developing modern thinking and enhancing ideological literacy and immunity constitute important areas in this process. Consequently, ideological and educational activities should be based on scientific research, credible information, open public discussion and approaches that take into account the interests and needs of young people.
