Abstract

This article analyzes the role and importance of innovative technologies in achieving ideological unity of young people in the context of globalization. The issues of forming ideological immunity of young people through information and communication technologies, digital platforms and modern educational tools are highlighted. During the study, effective methods of developing national and universal values in the minds of young people were considered.

Keywords: Globalization, youth, innovation technologies, ideological merger, digital education, ideological immunity, information technologies.

Introduction

In today's era of globalization, economic, political and cultural ties between countries are becoming increasingly stronger. This process is also significantly affecting the lives, worldviews and spiritual values of young people. In particular, the rapid development of the Internet and information and communication technologies, while creating new opportunities for young people, is also causing the spread of various ideological threats.

Raising young people in the spirit of respect for national values, strengthening their ideological immunity, and ensuring their active participation in the development of society are among the urgent issues of today. Therefore, the issue

of achieving ideological unity of young people based on innovative technologies is of particular scientific importance.

The results of the study showed that innovative technologies are emerging as an important factor in the ideological unification of young people.

First, digital education platforms are expanding young people's access to knowledge and developing independent thinking skills.

Secondly, rapid information exchange among young people through social networks is increasing, and the process of unification based on common goals and values is developing.

Third, online seminars and webinars are serving as an effective tool for increasing the political, legal, and spiritual knowledge of young people.

Fourth, interactive programs created based on multimedia and artificial intelligence technologies are increasing the interest of young people and helping to strengthen their ideological immunity.

Also, research during youth media literacy among develop The need was also identified.

Globalization under the circumstances of the youth ideological merger society stability and development important factor is considered. Innovative technologies and this of the process efficiency to increase service is doing. Especially modern education technologies through the youth national and universal to values respect in the spirit upbringing opportunity is expanding.[1]

However, the presence of various foreign ideas, extremist views, and information attacks on the Internet can have a negative impact on the ideological consciousness of young people.

From this besides, innovative technologies of the youth not only knowledge and skills development, but their socialization, spiritual maturity and ideological of views also important in the formation place is holding . Today on the day digital technologies through of the world various in countries living youth mutual communication to do, to experience exchange and in cooperation activity take to

go to the possibility has This is a in them open thoughtfulness , tolerance and intercultural communication skills to develop service is doing. This with together, young people national identity understanding, historical to inheritance respect with look and national values preservation issues are also relevant importance profession is doing.

Innovative technologies based on organization being done education processes traditional education to the methods relatively more interactivity and efficiency For example, remote education platforms, virtual laboratories, electronic libraries and mobile applications of the youth knowledge to take opportunities noticeable at the level is expanding. Such opportunities through youth geographical from the location strict look, the world leader education institutions by presented being done scientific from resources uses possible. As a result, their intellectual potential increase, global labor in the market competitive personnel as formations ground is created.

Youth ideological in the merger social networks the place is also separate importance has. Social networks through youth certain social, cultural and spiritual ideas around united, diverse projects and initiatives done increase to the possibility has In particular, ecology, healthy marriage style, reading, volunteering and charity to their activities dedicated online communities of the youth society in life activity to increase service " Social networks of the youth information exchange, social activity and general values based on in the merger important communicative field as service is doing "[2]

Such partnerships as a result youth mutual solidarity, responsibility and solidarity such as important social qualities They also occupy artificial intellect technologies development individual abilities of young people and needs into account received without education to take opportunities expanding. Artificial intellect based on education systems students knowledge level analysis to them suitable training materials recommendation This is education quality increase with together, young people independent education to take was It also increases

interest through in them critical thinking, problems analysis to do and innovative approaches application skills is formed.

However innovative of technologies positive aspects with one in line some negative There are also effects. In particular, on the internet spreading lie information, destructive ideas, extremist promotions and various ideological threats of the youth to the mind negative impact to show possible . Especially, information of the flow too much outside abundance some in cases of the youth right and wrong information in the differentiation difficulties gives birth. This media literacy due to development , information critical analysis to do skills formation and internet culture promotion today's of the day priority from the duties one is considered .[3]

Media literacy of the youth information sources evaluation, their reliability determination and various manipulative from the effects protection opportunities increases. This for the purpose education media education in institutions elements training to programs input, special training and seminars organization to grow important importance has. From this besides, parents and of educators digital from technologies use culture increase in youth healthy information in the environment to be educated service does.

Innovative technologies of the youth patriotism feelings also effective in strengthening tool become service to do possible. Historical monuments, national values and great ancestors to the legacy dedicated virtual tours, electronic museums, mobile applications and multimedia products of the youth national history and to culture was interest As a result, they own The rich spiritual heritage of its people legacy deeper understands and national pride feeling is formed.[4]

Also, young people social to life active attraction in the process of electronic government systems, online appeals platforms and digital citizenship initiatives important role is playing. Such systems through youth state and society in life face giving processes about fast information to take, own offer and comments to inform and social problems to the solution contribution add to the possibility has

They will be. This is their citizenship responsibility and legal culture to raise service does.

In general in short, globalization under the circumstances of the youth ideological merger and spiritual perfection in providing innovative of technologies place increasingly increasing is going on. Only that's all innovative technologies society development, national development and perfect generation upbringing on the way effective factor as service to do possible. Therefore, the state , education institutions , family and citizenship society of the institutions mutual cooperation based on of the youth ideological the merger to provide aimed at innovative approaches further develop and improvement current task become As a result , modern knowledge and to skills own, national and universal to values loyal, high spiritual , independent thinker and Homeland to prosperity worthy contribution add can young generation formation opportunity expands.[5]

Conclusion as in other words, globalization under the circumstances of the youth ideological to the merger in reaching innovative technologies important importance has. Modern information and communication tools of the youth knowledge and worldview expansion, they have national pride and patriotism feelings in formation effective tool become service does.

In the future of the youth ideological immunity reinforcement for innovative education programs wide current national digital platforms develop and media literacy increase according to systematic work reinforcement necessary.
